

## MULTI SYSTEM

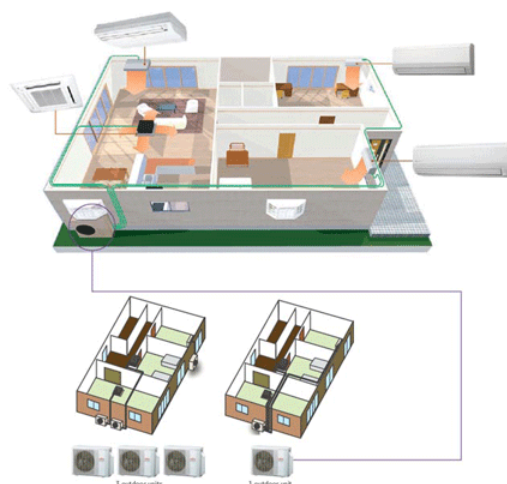

- One outdoor unit can be connected to a wide variety of indoor units, including wall mounted, consoles, cassette and ducted units
- Each room can be individually controlled, allowing you to set different temperatures in each room, helping save running costs by heating or cooling rooms as required
- Energy setting operations allow you to save energy, helping reduce power costs
- Can be used in residential and commercial operations

## CONVENIENT AND ECONOMICAL

Multi Split Systems are one of today's most advanced forms of air conditioning. One outdoor unit can power up to 4 indoor units simultaneously, yet it remains highly energy efficient when operating just one indoor unit at low capacity.

## WIDE RANGE OF CUSTOMISABLE APPLICATIONS

The range includes 6 different indoor unit types and 14 different models ranging in capacity from 2.3kW to 6.8kW. With such a wide range of options to choose from, there's a combination to suit almost any need from a small apartment to a large family home.

## INDEPENDENT CONTROL

Each indoor unit can be operated independently. That is, on/off, temperature, air movement, up/down/left/right, time clock operation, can all be controlled from their own wireless remote.
