

Driving More Efficiently

[Personalize Fuel Prices ▾](#)

Drive Sensibly

Aggressive driving (speeding, rapid acceleration and braking) wastes gas. It can lower your gas mileage by 33% at highway speeds and by 5% around town. Sensible driving is also safer for you and others, so you may save more than gas money.¹

Driver feedback devices can help you drive more efficiently. A recent study suggests that they can help the average driver improve fuel economy by about 3% and that those using them to save fuel can improve gas mileage by about 10%.²

That's like saving about \$0.07 to \$0.23 per gallon.

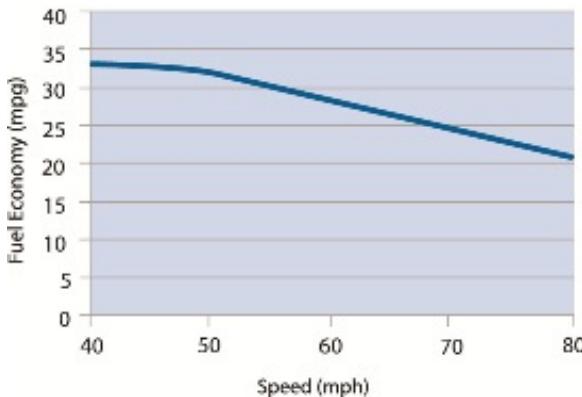

Fuel Economy Benefit:

5%–33%

Equivalent Gasoline Savings:

\$0.12–\$0.77/gallon

Observe the Speed Limit

While each vehicle reaches its optimal fuel economy at a different speed (or range of speeds), gas mileage usually decreases rapidly at speeds above 50 mph.

You can assume that each 5 mph you drive over 50 mph is like paying an additional \$0.16 per gallon for gas.³

Observing the speed limit is also safer.

What is the penalty for my car?

Fuel Economy Benefit:	7%–14%*
Equivalent Gasoline Savings:	\$0.16–\$0.33/gallon*
* Average savings, assuming drivers are willing to slow down 5 to 10 mph and fuel costs \$2.33 per gallon.	

Avoid Hauling Cargo on Your Roof

Hauling cargo on your roof increases aerodynamic drag (wind resistance) and lowers fuel economy.

A large, blunt roof-top cargo box, for example, can reduce fuel economy by around 2% to 8% in city driving, 6% to 17% on the highway, and 10% to 25% at Interstate speeds (65 mph to 75 mph).⁴

Rear-mount cargo boxes or trays reduce fuel economy by much less—only 1% or 2% in city driving and 1% to 5% on the highway.

If you need to use an external cargo container, removing it when it's not in use will save fuel and money.

Fuel Economy Benefit:	2%–17%
Equivalent Gasoline Savings:	\$0.05–\$0.40/gallon

Remove Excess Weight

Updated Information

Avoid keeping unnecessary items in your vehicle, especially heavy ones. An extra 100 pounds in your vehicle could reduce your MPG by about 1%.⁵ The reduction is based on the percentage of extra weight relative to the vehicle's weight and affects smaller vehicles more than larger ones.

Fuel Economy Benefit:	1%/100 lbs.
Equivalent Gasoline Savings:	\$0.02/gallon

Avoid Excessive Idling

Idling can use a quarter to a half gallon of fuel per hour, depending on engine size and air conditioner (AC) use. Turn off your engine when your vehicle is parked. It only takes a few seconds worth of fuel to restart your vehicle. Turning your engine on and off excessively, however, may increase starter wear.

If you'd like to promote idle reduction in your area, the Clean Cities IdleBox Toolkit can help you get started.

Fuel Cost Savings:	\$0.01–\$0.02/min. (AC off)
	\$0.01–\$0.02/min. (AC on)

Use Cruise Control

Using cruise control on the highway helps you maintain a constant speed and, in most cases, will save gas.

Note: Cost savings are based on an assumed fuel price of \$2.33/gallon.
