Ecovantage can help you save energy and money

Energy costs have gone through the roof and you can do something about it.

Ecovantage can show you how easy it is to reduce wasted energy and reduce costs. Over the past 5 years we have helped tens of thousands of households and businesses throughout Victoria, NSW and SA, reduce power consumption through practical action.

In most cases, Government incentives are available to make the upfront move to energy efficiency both easier and cheaper.

Our services to households and businesses include:

- **Energy efficient lighting solutions** for your home or business.
- **Business savings opportunities** to maximise the rewards on energy efficiency activities.
- Rebates on energy efficient appliances such as **hot water, heating, pool pumps, and solar PV.**
- **Partner services** to support plumbers and electrical companies access government incentives for space, water heating and lighting upgrades.
- **Water saving showerhead exchanges and draft proofing**(including chimneys).
- **Energy audits** for buildings including NABERS Ratings.

Ecovantage is accredited in NSW under the **Energy Savings Scheme (ESS)** and in Victoria under the **Victorian Energy Efficiency Target (VEET)** to offer rebates, aimed at assisting and encouraging businesses to reduce the upfront cost of adopting energy efficient technology.

Business Energy Efficiency Case Study – Balmain Toy Shop

Lighting upgrade cost reduced by rebate bringing ROI to nine months!

A business in Sydney has highlighted the savings that can be generated through the installation of energy efficient lighting. Firstly by using rebates to subsidise the cost of updating old and expensive-to-run lights, and secondly, by reaping the benefits of reduced energy bills. The cost-benefit is clear: an initial small outlay will produce continued savings in the decades ahead.

A toy shop in Balmain swapped 28 x 50W halogen downlights with 28 x 7W LED downlights (which uses 85% less energy) and 26 x 36W T8 fluorescent tubes with 25W T5 adapter kits (which use 30% less energy). The initial cost for the upgrade was subsidised through the NSW government's Energy Savings Scheme, which provides excellent financial incentives for businesses to reduce their energy consumption – in fact, 51% of the outlay was covered by this scheme. Teamed with the huge reduction in energy bills through the use of efficient lighting, the investment is set to repay itself in just nine months – a very attractive purchase that will bring clear long term benefits. Additionally the cost of electricity is likely to rise, providing the shop owner with even more potential to save over the course of time.

The owner also expects this project will encourage positive environmental behaviour in staff and customers. Once the results have been identified, the shop owner will consider rolling it out across all NSW stores.

Ecovantage is an award winning energy efficiency services company operating in Victoria, New South Wales and South Australia
